

**Biology 437/537. Infection and Immunity**, Spring 2021, MWF 11:00-11:50

Instructors: Tom Kieft, Linda DeVeaux

Pre-requisite: Biol 341

There isn't a more timely topic in biology right now than infectious disease and how our bodies' immune system responds to infection and other threats. The course includes a survey of infectious disease mechanisms and diseases of humans, with special emphasis this semester on viruses, including SARS-CoV-2. We will study innate and acquired immunity, including development of vaccines.
