POSITION ANNOUNCEMENT

TITLE: SOFTWARE DEVELOPER (4)  DEPT: ICASA

REG ☑ TEMP ☐ FULL TIME ☑ PART TIME ☐

STARTING RATE or SALARY RANGE $65,000-$80,000
Employees being promoted to a higher classified position receive the minimum for the position or a pay rate adjustment of 8% whichever is greater.

INTERNAL POSTING THROUGH: Concurrent* CONSIDERATION WILL BE GIVEN FIRST TO TEMPORARY AND REGULAR TECH EMPLOYEES WHO APPLY WITHIN THE 7 DAY INTERNAL POSTING. APPLICATIONS RECEIVED AFTER THE 7 DAY POSTING MARGIN WILL BE CONSIDERED WITH OTHER OUTSIDE APPLICANTS.

JOB DUTIES:
The software developer will be responsible and capable of building out and maintaining large complete systems. This critical role must have a strong technical background, business acumen, strong leadership skills, and people-management skills. Analytical thinking also is very important, as this position often involves problem resolution and process development. The Software Developer will collaborate with mathematicians, research scientists, data scientists, data analysts and engineers (mechanical and electrical) and other team members on the implementation, testing, deployment and ICASA’s technology. The Software Developer will support the Institute for Complex Additive Systems Analysis (ICASA), a research division of New Mexico Institute of Mining & Technology (NMIMT) in a full spectrum of software design, development, test and implementation and technology transfer of ICASA’s analytical tool-sets to the customer. The Software Developer will provide technical contract support to ICASA’s customer base and provide internal support where needed. The candidate will work in an innovative and collaborative environment to address national security challenges through research and development in data science, geospatial science, computer science, complex systems, artificial intelligence, and machine learning.

REQUIRED QUALIFICATIONS:
This position supports the Playas Electronic Attack and Cyber Environment (PEACE) program mission to provide suitable systems and/or technical, analytical, and support services necessary for Service and Joint information warfare activities, providing advanced technology solutions for training, experimentation, exercise, and rehearsal purposes. To support critical experimentation and training events, the Cyber/Electronic Warfare (EW)-kinetic laboratory and testing environment requires understanding cyber-connected devices interacting with the physical environment found in manufacturing automation, utilities and transportation. Understanding these interactions will enable commanders to induce kinetic effects through cyber or vice versa and provide Department of Defense (DOD) with methods to help civilian authorities better protect domestic infrastructure such as dams, electric power grid and airports as well as help planning to improve the resilience of deployed bases. In addition, the cyber/EW-kinetic environment provides the opportunity to provide quick reaction testing to emerging cyber/EW threats for R&D and operations. The PEACE program is managed and executed within the Institute for Complex Additive Systems Analysis (ICASA), a research division of New Mexico Institute of Mining and Technology (NMT).
